## Easy To Use, *Lightning* Fast

Get to know the new Sunflower  
9800 Series Single Disc Air Drill.

BY THARRAN E. GAINES

**TO DATE, THE MOST COMMON WAY TO PLANT MORE** acres per hour has been to buy a larger planter or drill. However, the new Sunflower 9800 Single Disc Air Drill gives producers the advantage of both size and speed, as well as a simple design with fewer moving parts that minimizes downtime.

“We had one of the test machines out here for about a month, and I just loved it,” says Sam Beauchamp, who grows wheat, corn and cotton on his own farm in the Texas Panhandle and custom farms several thousand acres more. “All total, I used it to plant around 6,000 acres of wheat behind everything from silage corn stubble and plowed ground to no-till cornstalks; and it worked well in all of those conditions,” he adds, noting that he already has his own 40-foot Sunflower Model 9840 on order. The 9800 Series also offers 30- and 50-foot planting widths.

“I normally run three air drills during planting time, and I’ve tried about every brand,” he continues. “But I’ve never used one that is as easy to adjust and use ... or can travel as fast through the field as the Sunflower 9800 Series. It’s definitely the cream of the crop.” >>
