

20% M O R E capacity using 20% L E S S fuel.
That's an average from a combine that's anything but.

CELEBRATING 75 YEARS:
*Massey Ferguson® invents the
first self-propelled combine.*

THESE AREN'T TYPICAL results for a combine. But then, our MF9540 and M9560 aren't your typical combines. Nowhere else will you find such a high level of innovation. Like the Trident™ Processor and how it improves throughput capacity. Or the V-Cool™ System which keeps the engine at optimum temperature, and cleans the radiator screen as you work. Or our fuel-saving clean air technology. Impressive stuff. And it gets better. As do the results. To learn more about the MF9500 Series, visit your dealer or masseyferguson.us.

Comparative tests between MF9540 & MF9795 or MF9560 & MF9895. Results vary depending on crop and conditions.

MASSEY FERGUSON is a worldwide brand of AGCO.
